

# Theft Matters

Issue 5

Winter 2012

**Special points of interest:**

- Take the next step to wireless CCTV alarm verification with SG Systems UK!
- Putting a stop on bottle theft!
- SG Systems launches new Jewellery Tag.
- The launch of the new RF Handheld Verifier/Deactivator
- Tag Removal Detector (Dummy).
- Solutions for tablet PC's

## Take the next step to wireless CCTV alarm verification with SG Systems UK!

SG Systems UK (Shopguard) has launched the **AlarmView**, which is an innovative, long distance wireless alarm verification system, which can provide cost effective and fast visual verification/monitoring of suspected criminal activity.

It is suitable for both, professional monitoring stations, self-monitoring or residential and small businesses.

This professional wireless alarm system provides instant **Visual Verification** with full colour images and a Remote "Look-In" feature.

The clever intelligence of the system also allows remote action to mobile phones (SMS) with all images retrieved on the device of authorised users.

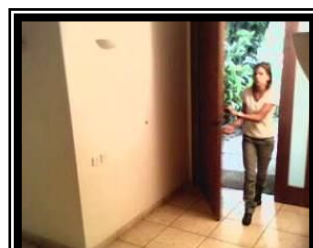

***"The new AlarmView visual monitoring and verification system is an economical, investigatory and confirmation tool that can provide effective monitoring of suspected criminal activity."***

**Colour Images normally received at the Alarm Receiving Centre in under 60 seconds!**

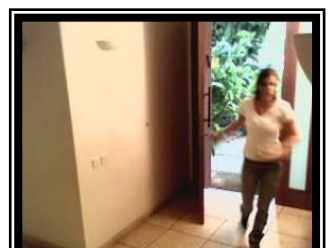

**Pre Alarm**

**Alarm Event**

**Post Alarm**

*"We at SG Systems believe that our new Bottlewrap is the most efficient and the only alarming bottle tag on the market, providing a rapid return on investment while also guarantee safe merchandising without compromise to losses and presentation space."*

**"TRUE LOSS PREVENTION MEANS: DETERRENCE FIRST WITH DETECTION SECOND, IF ULTIMATELY REQUIRED."**

## Putting a stop on bottle theft!

Statistical data shows that the loss due to bottle beverage theft has the highest percentage of total stock shortage in the relevant retail sectors. According to the **Centre for Retail Research 2011**; alcohol, mainly well-known spirits are on the **first place of the Most-Shoplifted List**.

To help with the growing problem, **SG Systems** has launched the new Bottlewrap, which is believed to be the only **two way alarming** bottle tag on the market that **fits most bottles** of alcohol, including wine, champagne, liqueurs and other spirits.

This sophisticated bottle tag not only guarantees **damage free protection** to Champagne foil but also **prevents illegal opening** of highly valued spirits in store.

The E.A.S (Electronic Article Surveillance) **tag** is built into the bottom of the top lock unit and gives an **audible and visual warning** in the event of attempted removal of the product or if the strapping is cut or broken.

It is **made of highly resistant polycarbonate** construction that gives products **maximum visibility** while still offering **best protection**. Compatible with all RF and AM E.A.S. Systems, this fabulous solu-

tion is **easy to activate** by a press of a button and **simple to unlock** at the point of sale in one movement via the tag E.A.S. detacher allowing for **fast and efficient P.O.S. processing**.

## SG Systems launches new Jewellery Tag

The new **Jewellery Tag** is an easy and effective solution to **protect jewellery, watches** or other **small items** against theft while allowing an attractive and effective merchandising display.

Its integrated **solid clip lock** with **silicone protection bar** protects the expensive small items from being stolen.

This efficient security tag is very **simple to attach** and **easily removed** at the point of sale with a standard E.A.S. detacher and its **compatible with most 8.2 mhz RF** and **58khz AM Systems**.

## SG Systems UK launches the new RF HANDHELD VERIFIER/DEACTIVATOR WAND!

This new unique 8.2 mhz RF handheld Verifier/Deactivator Wand is designed to deliver quick and efficient label detection and deactivation, all in one quick movement.

This innovative product is a powerful solution and combines functionality of the standard Label Verifier and the Deactivator in an easy to hold RF EAS tool, which can both detect and deactivate all 8.2 mhz labels with the detection range

about 8cm and the deactivation range 5cm.

This efficient handheld verifier/deactivator is equipped with the latest DSP (Digital Signal

Processing) technology and can be carried by a sales assistant or security guard on a belt, allowing a full door check operation and quick and easy customer interaction without issue or delay.

The RF Handheld Verifier/Deactivator Wand has low power consumption and the built in 1700mAh lithium battery, which can be charged within two hours, by placing in its docking cradle.

*"We at SG Systems believe that this RF Handheld Verifier/Deactivator Wand will become an irreplaceable loss prevention product for busy retailers, who would like to accelerate the checkout process and improve customer satisfaction."*

## Tag Removal Detector (Dummy)

SG Systems UK (Shopguard) has launched the new Tag Removal Detector for use in changing rooms or the shops floor.

This clever product is a robust and very cost effective solution, designed to create deterrent effect and help prevent unauthorised removal of the security tags attached to merchandise.

This Tag Removal Detector gives a clear deterrent warning by way of its design and flashing LED light, that may deter people

considering violation of EAS security tags.

It is constructed in a heavy duty metal housing with a unique photo-electric charging cell to power the LED warning light and therefore never needs a battery!

This unit can quickly and easily be installed via loop hook screwed to walls of fixtures.

## Solutions for tablets PC's

Due to the rapid pace of innovations consumer electronics and information technology industries are constantly putting new products on the market.

These products are extremely popular and sell at a high speed immediately after launching them into the retail areas.

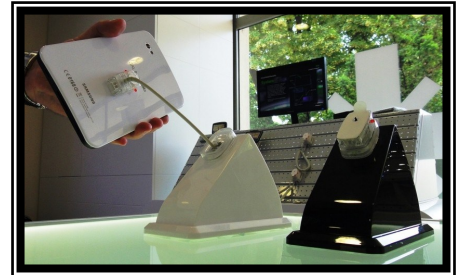

These days it is a fundamental consumer want that displayed

products are **available to handle** and **experience prior to purchase**. This in-shop interaction provides a **greater shopping experience** for the consumer which results in a measurable increase in retail sales.

We continue to monitor these market trends by developing cutting-edge solutions to **protect** these displayed merchandise. Our innovative retail security solutions help you **boost your sales**, while **reducing shrinkage**. As a result, we are delighted to introduce two new products that we have developed for handheld devices such as **smart phones, tablet computers and eReaders**, which are displayed on flat

surface show tables, counters and shelves.

The **Pyramid** and **Peak25** are ideal solutions to display products on such surfaces providing the **best exposure** as well as the **ultimate safety** against theft loss.
